

What is claimed is:

1. A recording media editing apparatus comprising:

recording size reading means for reading sizes of a free
space and a used space in each of recording media of different
5 types, the recording media respectively storing digital image
data;

recording size display means for displaying on a display
device the used space size and the free space size of each of
the recording media by using the same scale for the same sizes
10 for enabling visual comparison thereof; and

first image data editing means for editing the digital
image data stored in each of the recording media whose used space
size and free space size are displayed by the recording size
display means.

15 2. The recording media editing apparatus according to
Claim 1, wherein the sizes are displayed in the form of a bar
graph.

3. The recording medium editing apparatus according to
Claim 2, wherein the first image data editing means moves the
20 digital image data stored in one of the recording media to
another one of the recording media by moving a portion in the
bar graph corresponding to the used space of the former
recording medium to a portion in the bar graph corresponding
to the latter recording medium.

25 4. The recording media editing apparatus according to

Claim 3, wherein, when the first image data editing means moves the digital image data stored in the former recording medium to the latter recording medium, the first image data editing means confirms that the digital image data have been copied properly in the latter recording medium by comparing the digital image data in the two recording media after copying the digital image data; and deletes the digital image data from the former recording medium thereafter.

5. The recording media editing apparatus according to Claim 1, further comprising:

recording area reading means for reading a recording area of the digital image data recorded in each of the recording media of different types;

recording area display means for displaying on the display device a recording order of the digital image data and a image file size corresponding to the number of recorded pixels thereof for visual confirmation of the recording area position and the image file size, based on the recording area read by the recording area reading means; and

second image data editing means for editing the digital image data whose recording area position and image file size are displayed by the recording area display means.

6. The recording media editing apparatus according to Claim 2, further comprising:

recording area reading means for reading a recording area

of the digital image data recorded in each of the recording media of different types;

recording area display means for displaying on the display device a recording order of the digital image data and
5 a image file size corresponding to the number of recorded pixels thereof for visual confirmation of the recording area position and the image file size, based on the recording area read by the recording area reading means; and

second image data editing means for editing the digital
10 image data whose recording area position and image file size are displayed by the recording area display means.

7. The recording media editing apparatus according to Claim 3, further comprising:

recording area reading means for reading a recording area
15 of the digital image data recorded in each of the recording media of different types;

recording area display means for displaying on the display device a recording order of the digital image data and a image file size corresponding to the number of recorded pixels
20 thereof for visual confirmation of the recording area position and the image file size, based on the recording area read by the recording area reading means; and

second image data editing means for editing the digital image data whose recording area position and image file size
25 are displayed by the recording area display means.

8. The recording media editing apparatus according to Claim 4, further comprising:

recording area reading means for reading a recording area of the digital image data recorded in each of the recording media of different types;

recording area display means for displaying on the display device a recording order of the digital image data and a image file size corresponding to the number of recorded pixels thereof for visual confirmation of the recording area position and the image file size, based on the recording area read by the recording area reading means; and

second image data editing means for editing the digital image data whose recording area position and image file size are displayed by the recording area display means.

9. The recording media editing apparatus according to Claim 5, wherein the second image data editing means enables specification of a portion of the digital image data whose image file size is desired to be changed from among the digital image data displayed on the display device, and carries out resizing processing on the portion of the digital image data that has been specified.

10. The recording media editing apparatus according to Claim 6, wherein the second image data editing means enables specification of a portion of the digital image data whose image file size is desired to be changed from among the digital image

data displayed on the display device, and carries out resizing processing on the portion of the digital image data that has been specified.

11. The recording media editing apparatus according to
5 Claim 7, wherein the second image data editing means enables specification of a portion of the digital image data whose image file size is desired to be changed from among the digital image data displayed on the display device, and carries out resizing processing on the portion of the digital image data that has
10 been specified.

12. The recording media editing apparatus according to Claim 8, wherein the second image data editing means enables specification of a portion of the digital image data whose image file size is desired to be changed from among the digital image
15 data displayed on the display device, and carries out resizing processing on the portion of the digital image data that has been specified.

13. A recording media editing apparatus comprising:
recording area reading means for reading a recording area
20 of digital image data recorded in a recording medium;

recording area display means for displaying on a display device a recording order of the digital image data recorded in the recording medium and a image file size corresponding to the number of recorded pixels thereof for visual confirmation of
25 the position and the image file size, based on the recording

area read by the recording area reading means; and

image data editing means for editing the digital image data whose recording area position and image file size are displayed by the recording area display means.

5 14. The recording media editing apparatus according to Claim 13, wherein the image data editing means enables specification of a portion of the digital image data whose image file size is desired to be changed from among the digital image data displayed on the display device, and carries out resizing
10 processing on the specified portion of the digital image data.
